

MAINTAIN PEAK
PERFORMANCE ON
YOUR ETHOS

| Protect your investment with a PM

Proper maintenance ensures that you have your ETHOS always at its best, avoiding poor digestion results and failure from unchecked wear. Our Preventative Maintenance mitigates the effects of usage over time.

| The Preventative Maintenance visit includes

- Comprehensive checkout and optimization of all ETHOS components.
- Proactive replacement of High Voltage capacitors.
- Cleaning, testing and calibration of infrared sensors traceable to NIST.
- Testing and calibration of thermocouple or fiber optics probes traceable to NIST.
- Verification of microwave power output to specifications, preventing downtime by determining weaker components that may require attention.
- Evaluation of accessories conditions and critical consumables, and additional training on care and maintenance
- Additional training on applications, rotors, and critical consumables

Accuracy

Accuracy and precision are essential to producing quality data. Verify that every part of your ETHOS and rotor components are working optimally to ensure complete digestion, free of contamination, and loss of sample

Longevity

Regular maintenance is not about just keeping your ETHOS running, it's about ensuring long term dependability and accuracy.

Value

Time is valuable and samples can be precious, limited, or simply time sensitive due to projects timelines or regulations. Don't lose time, money, and important samples to a faltering device situation that is preventable with preventive maintenance.
